Professional Summary

Senior Backend Engineer with 5+ years of experience building scalable distributed systems using Java, Spring Boot, Kafka, Redis, MySQL, and Microservices. Experienced in designing secure REST APIs, optimizing backend performance, and developing payment and lending platforms with a focus on reliability, scalability, and maintainability.

Experience

Stashfin Pvt. Ltd., *Software Developer Engineer - II* | Gurgaon, India *Mar 2025 - Present*

- Owned backend development of payment microservices handling UPI, eNACH mandate registration, repayments, and reconciliation workflows, ensuring reliable transaction processing for lending operations.
- Investigated and resolved production issues across distributed payment services through root-cause analysis, structured logging, and Redis-backed optimizations, improving overall system reliability.
- Designed and implemented secure REST APIs using JWT authentication for internal platforms, streamlining lending operations and internal workflows.
- Built internal Django dashboards used by operations and compliance teams to monitor mandate lifecycle, audit records, and repayment workflows.

Yatra Freight (*Nimap Infotech Pvt. Ltd.***),** *Software Developer* | Gurgaon, India *Feb 2024 - Feb 2025*

- Developed backend services using NestJS and MySQL to automate lane creation and award workflows, reducing manual operational effort and improving logistics turnaround time.
- Leveraged **Kafka** for asynchronous processing and **Redis** for caching, improving application throughput and system resilience.
- Developed optimized SQL queries using joins, CTEs, and NoSQL aggregation pipelines to support reporting and operational workflows.
- Developed a Next.js-based bidding interface with **Redux**, reducing vendor rate submission processing time by 20% and improving operational efficiency.

Antino Labs Pvt. Ltd., *Software Developer* | Gurgaon, India *Oct 2022 - Jan 2024*

- Built backend services for fintech and SaaS platforms, optimizing complex MongoDB aggregation pipelines for high-volume reporting endpoints and improving query performance.
- Integrated payment gateways (**Razorpay**, **PhonePe**, **Instamojo**, **Stripe**) using Node.js, increasing successful transaction rates by 40%.
- Integrated scheduling, communication, and document generation features using Cron, Twilio, SendGrid, Google Calendar API, and LaTeX-based PDF generation.

Infosys Pvt. Ltd., *Senior System Engineer* | Bengaluru, India *Nov 2020 - Sep 2022*

- Developed backend services and streaming pipelines for telecom analytics platforms using **Kafka**, **MySQL**, and **Apache Druid**.
- Improved analytical query performance by 20% through indexing strategies in **MySQL** and **Apache Druid**, enabling real-time dashboards and insights.
- Designed and deployed a **Kafka** streaming pipeline processing 14–15 million messages per hour, improving data quality and processing timeliness by 50%.
- Optimized network throughput for SVLAN and CVLAN configurations through protocol-driven enhancements and performance benchmarking.

Skills

Languages:	Primary: Java | Proficient: SQL, JavaScript | Others: C++, Python, Go, PHP, TypeScript
Frameworks:	Primary: Spring Boot | Proficient: Node.js | Others: NestJS, React, Next.js
Databases:	Proficient: MySQL, MongoDB | Others: Apache Druid, KSQL
Distributed Systems:	Kafka, Redis, Microservices, REST APIs
DevOps & Tools:	Docker, Kubernetes, Jenkins, Git, Postman, Swagger, Jira
Core:	System Design, Design Patterns, OOP, SOLID Principles, Data Structures & Algorithms
Security:	JWT, OAuth 2.0
Cloud:	AWS (Lambda, DynamoDB)

Education

8.02 GPA **BTech | Computer Science and Engineering**, *Galgotias College* | Greater Noida, India *2016–2020*
